

TigerCoin Whitepaper (Draft)

Version 0.2 (English Full Draft)

Document Date: 2026-03-01

Official Website (single source of truth): <https://tiger-coin.com>

Chain: Base Mainnet (Chain ID 8453)

Token: TigerCoin (TIGER)

Contract: 0xf6af794ef83826beeeC62f50D691532945c2Ae23

Total Supply: 99,999,999 TIGER (one-time mint; no planned re-mint)

Transfer Tax: None (0%)

IMPORTANT NOTICE: This document is for informational purposes only and does not constitute investment advice, an offer to sell, or a solicitation to buy any security or financial product. TigerCoin is not offered as an investment product and no returns, dividends, profit-sharing, or buybacks are promised.

1. Executive Summary

TigerCoin (TIGER) is a utility-oriented digital credential intended to support membership experiences, participation, and benefit redemption within defined contexts. TigerCoin may be designated as a digital redemption and participation credential in certain brands, products, and controlled programs operated by Lobo Group Ltd and its affiliated entities (the “Operating Entities”).

At the current stage, TigerCoin is not intended to function as a currency, legal tender, payment instrument, or discount entitlement. Any referenced benefits are optional, limited in scope, and provided solely at the discretion of the relevant Operating Entity at the time of use, subject to applicable laws, regulations, and internal operational policies.

2. Official Information Source & Anti-Fraud

All official announcements, links, and updates related to TigerCoin are published exclusively on the official website: <https://tiger-coin.com>. For security reasons, any social channels are subject to change. Always verify any third-party links and accounts through the official website before interacting.

Anti-fraud notice: Project representatives will never contact you first via private messages to request funds, private keys, or wallet signatures unrelated to explicit redemption flows published on the official website.

3. Project Entities & Responsibility Boundaries

3.1 Issuer and Operating Entities

Issuer: Lobo Group Ltd. (Cayman Islands).

Registered name & registration reference (optional): Lobo Group Ltd. (Cayman Islands, Exempted Company). Company Registration No.: CR-430344.

Operating Entities: Lobo Group Ltd and such affiliated entities as may operate specific benefit programs in their respective jurisdictions. Benefit publication, redemption rules, and fulfillment are carried out by the relevant Operating Entity and may vary by location and time.

3.2 No Governance Rights / No Equity

- TigerCoin does not represent equity, debt, profit distribution rights, or governance rights in any company.
- Holding TigerCoin does not grant voting rights over corporate decisions, budgets, treasury management, or operational policies.
- No automatic or proportional distribution of funds or benefits is promised based on token holdings.

4. Token Information & Technical Disclosure

4.1 Core Parameters

- Network: Base Mainnet (Chain ID 8453)
- Name / Symbol: TigerCoin / TIGER
- Contract Address: 0xf6af794ef83826beeeC62f50D691532945c2Ae23
- Total Supply: 99,999,999 TIGER (minted once)
- Token Standard: ERC-20
- Transfer Tax: None (0%)

4.2 Supply & Minting Policy

TigerCoin uses a one-time mint model: the entire fixed supply is minted once in the constructor and transferred to the project Safe multisig for custody and distribution. No additional minting or burning is enabled by the token contract.

Contract control disclosure: The deployed TIGER token contract is non-upgradeable and does not include any owner/admin role. There are no privileged functions such as minting additional supply, pausing transfers, blacklisting addresses, changing balances/allowances, or modifying token fees. After deployment, the token logic is immutable; only normal ERC-20 transfers/approvals are available.

4.3 Source Code Verification & Transparency

Source verification status: The team will publish the BaseScan “Verified Contract” link on the official website (Official Links page) once verification is completed. If the explorer shows the contract as unverified at any moment, users should rely on the official disclosures and links posted by the team.

The project recommends that users rely on verified sources and official disclosures published on the official website. Third-party explorers, wallets, and interfaces may display incomplete, delayed, or outdated information; if there is any discrepancy, the official website’s disclosures should be treated as the canonical reference.

4.4 Regulatory & Participation Notice (No Equity / No Returns)

TIGER does not represent equity, debt, profit rights, revenue share, dividends, or any form of investment return. The project does not promise any appreciation, repurchase, or financial benefit.

If the project or its affiliated operating entities initiate equity financing or strategic partnerships in the future, TIGER holders may, where lawful and subject to regulatory requirements and internal approvals, be considered for: (i) priority information notice, (ii) priority communication channels, and (iii) eligibility assessment for potential participation. This is not an offer, does not guarantee access, and does not create any entitlement.

5. Positioning, Intent & Scope

5.1 Current Intent

- TigerCoin is designed as a membership and benefits redemption credential within a defined ecosystem.
- TigerCoin is not marketed as an investment product; no returns, buybacks, or profit distribution are promised.
- TigerCoin is not intended to function as a currency, payment instrument, or discount entitlement at the current stage.

5.2 No Commitment on Market Functionality

The current design and descriptions focus on limited-use or controlled application contexts and do not constitute any commitment regarding future transferability, monetary use, exchange listings, market liquidity, or price support. If broader functionality is ever introduced, it will be pursued only within applicable regulatory frameworks.

6. Potential Utility & Real-World Context (Exploratory)

TigerCoin is designed to facilitate interaction in specific, limited contexts, such as access, eligibility, priority participation, or redemption within defined programs. One potential application under exploration is use within experimental food and hospitality environments, subject to local regulations and operational feasibility.

Separately, the team envisions the long-term development of noodle-based food concepts, beginning in China, expanding to other parts of Asia, and potentially to global markets. These commercial activities are independent operational initiatives and should not be interpreted as revenue guarantees, profit-sharing mechanisms, or investment returns associated with TigerCoin.

7. Benefits Programs & Redemption Framework

Official Benefits & Recognition Disclosure

The official website is the single source of truth for current benefit items, recognition programs, eligibility rules, and redemption procedures. Third-party summaries may be incomplete or outdate

7.1 Benefits List (to be published)

Operating Entities may publish a Benefits List, which may include goods, content, access rights, priority qualifications, or feature unlocks.

Benefit Scope (Current Coverage)

At the current stage, benefits are primarily available at participating locations in mainland China and through the official online channels. Overseas users may access selected benefits through online products, cross-border shipping (where available), and permitted benefit transfers in accordance with published rules and applicable laws.

Benefits List v1 release target: TBD (subject to legal/operational readiness).

A benefits item may include: benefit name, eligibility, redemption window, per-user limits, fulfillment method, and any jurisdictional constraints.

Co-Branding & Naming Recognition (Optional, Program-Based)

From time to time, the operating entities may launch recognition programs such as co-branding, store naming acknowledgements, or partner showcases (“Recognition Programs”). Specific terms—such as eligibility criteria, display format, duration, transferability, and revocation conditions—will be published on the official website and may be updated for compliance, operational, or brand reasons. Recognition Programs are optional and do not constitute financial returns.

7.2 Redemption Process (high-level)

1. Eligibility check (wallet signature and/or account binding, if applicable).
2. Select benefit item(s) from the published list.
3. Generate a redemption request and confirmation (may include a redemption code).
4. Fulfillment by the relevant Operating Entity (digital delivery, on-site verification, or logistics).
5. Support and dispute process under published policies.

Redemption page / rules URL on official website: <https://tiger-coin.com>

7.3 Program Changes

International Expansion (Non-Binding Roadmap) The project envisions a gradual expansion to overseas markets and partner ecosystems. If additional overseas stores or co-branded collaborations are introduced in the future, the project may seek to enable cross-region benefit interoperability, subject to operational feasibility, legal compliance, and official announcements. Nothing herein constitutes a commitment.

- Benefits and rules may be modified, paused, or discontinued due to compliance requirements, capacity constraints, inventory limits, fraud prevention, or operational decisions.
- No benefit constitutes a guaranteed entitlement. Participation is voluntary and subject to program rules at the time of use.

8. Operational Independence & Resources

The development of the TigerCoin ecosystem does not depend on public fundraising or capital contributions from token holders. Operational costs are supported by the Operating Entities’ internal budgets and business revenues, and/or pre-allocated ecosystem reserves, at the Operating Entities’ discretion.

Treasury is controlled via a multi-sig wallet. The project may publish treasury addresses and periodic disclosures after operational readiness and security review.

9. Compliance & Risk Factors (Non-Exhaustive)

By acquiring, holding, or using TigerCoin, you acknowledge and accept the following risks (non-exhaustive):

- Regulatory risk: laws and regulations regarding tokens, marketing, and redemptions may change across jurisdictions.
- No guarantee of benefits: programs may be limited, delayed, modified, paused, or discontinued.

- Operational and fulfillment risk: delivery may be affected by inventory, logistics, partners, or capacity.
- Technical risk: smart contracts, wallets, bridges, and third-party infrastructure may fail or be exploited.
- Market risk: no promise of liquidity, listings, price stability, or market support.
- Fraud risk: impersonators and fake groups may appear; only trust links published on the official website.

10. Messaging Guide (Safe vs. Avoid)

10.1 Safe Messaging (Recommended)

- Redeemable for listed benefits (goods, content, access) within a defined ecosystem.
- Designed to reward participation and unlock membership experiences.
- We publish a benefits list, redemption rules, and delivery milestones.
- No promise of returns; not offered as an investment product.

10.2 Avoid (High-Risk Claims)

- Any statements implying guaranteed profit, returns, dividends, buybacks, or price targets.
- Any claims that TigerCoin represents equity or equity-like rights.
- Any commitment to exchange listings, liquidity provision, or market-making.
- Any automatic distribution based on holding amount or fixed yield schedules.

11. Disclaimer

Nothing in this document constitutes legal, financial, or investment advice. TigerCoin is a utility-oriented credential intended for defined ecosystem interactions. The Operating Entities may modify this document and any related policies at any time, subject to applicable law.
